

Jillian Ramirez

Full Stack Engineer

Toronto, ON (437) 603-0481 jillian@jillianram-dev.com [Portfolio](#) [LinkedIn](#) [GitHub](#)

Full Stack Engineer with 3+ years at Accenture building enterprise AI-powered applications across 20+ accounts and teams of 60+. I architect GitHub Copilot agent systems that enable end-to-end agentic development, from PRD to production-ready components. Comfortable across **React**, **TypeScript**, **Node.js**, **Angular**, **Python**, and **LLM integrations** in fast-moving cross-functional teams.

Work Experience

- Frontend Engineer, LLM Applications** Accenture Jun 2024 – May 2026
 - Built an end-to-end document processing feature: file upload, LLM-driven form auto-population, and a multi-step reviewer approval workflow. Built with **React/TypeScript**.
 - Built a real-time conversational interface on top of LLM services using WebSockets, production-grade, handling concurrent sessions at enterprise scale. Built with **React/TypeScript**, **WebSockets**, and RESTful APIs.
 - Designed and shipped modular agentic AI components reusable across client accounts in an onshore-offshore delivery model, deployed on AWS Amplify, S3, and Lambda. Built with **React/TypeScript**.
 - Worked alongside a Staff Architect to design and implement a multi-agent GitHub Copilot system using Spec-Driven Development (SDD), specialized .agent.md files that take a PRD through TDD all the way to production-ready components. Led team adoption and iterated on agent quality.
- Full Stack Engineer** Accenture Sep 2023 – Jun 2024
 - Built and maintained RESTful API endpoints for a merchandising client, consumed across multiple enterprise accounts. Built with **Node.js** and Docker Compose.
- Software Engineer Intern** Instructr · Denmark (Remote) Jan 2023 – Mar 2023
 - Frontend development and integration testing in a remote Agile/Scrum startup. Built with **React**, **Cypress**, and Git.

Projects

- LensAI: AI Observability Dashboard** *React TypeScript FastAPI Python Anthropic SDK PostgreSQL*
 - Real-time monitoring dashboard for LLM API calls, tracking latency, token usage, cost, and error rates across Anthropic Claude API integrations. Built with a FastAPI/Python backend, PostgreSQL for metrics storage, and a React/TypeScript frontend.
- WildSphere: Interactive 3D Wildlife Visualization** *React 19 TypeScript Three.js Tailwind CSS TanStack Query v5 Framer Motion*
 - Architected and deployed an interactive 3D globe consuming live RESTful data from the iNaturalist API. Taught myself Three.js to bring wildlife data to life visually, with full ownership from system design to production. wildsphere.netlify.app
- Distiller: AI Document Assistant** *FastAPI Python ChromaDB LangChain React TypeScript*
 - RAG-based conversational AI tool that ingests documents and answers questions with source-grounded responses, built with a FastAPI/Python backend, ChromaDB for vector storage, LangChain for retrieval orchestration, and a React/TypeScript frontend. trydistill.vercel.app

Education

- Full-Stack Web Developer Bootcamp** · Ironhack, Madrid Jul 2022
- B.A. Digital Interactive Design** · Iberoamerican University, Mexico Jun 2018

Skills

Frontend: React | Angular | Next.js | TypeScript | JavaScript | HTML5 | CSS3
Backend: Node.js | FastAPI | Python | RESTful APIs | PostgreSQL | MongoDB | AWS
AI & Tools: LangChain | Anthropic Claude API | GitHub Copilot | Vitest | Cypress | Docker | Git

Passions & Hobbies

Outside of work, you'll find me at the CrossFit box, sketching, or exploring Toronto's coffee scene. I'm a vegetarian with a deep love for animals, care about wellness, both mine and others', and genuinely enjoy meeting new people and hearing their stories.
