★ Valid Canadian Work Permit

Full Stack Engineer with 3+ years building enterprise AI-powered applications at Accenture — 20+ enterprise accounts, teams of 60+, across global enterprise clients in regulated industries. I care deeply about user experience, clean code, and the people who use what I build. Comfortable working across frontend, design systems, and LLM integrations in fast-moving, cross-functional teams. Looking to grow in Toronto with a company where quality and collaboration actually matter.

Work Experience

Frontend Engineer, LLM Applications

Accenture Spain

Jun 2024 – Present

- Built an AI-powered document processing feature end-to-end — upload flow, LLM-driven form auto-population, and reviewer approval workflows across 20+ enterprise accounts. Built with **React/TypeScript**.
- Developed a real-time conversational AI interface using WebSockets, enabling low-latency frontend-to-LLM communication at scale. Built with **React/TypeScript**, **WebSockets**, and RESTful APIs.
- Implemented modular agentic AI components and supported AWS deployment across Amplify, S3, and Lambda. Built with **React/TypeScript**.
- Introduced TDD across the codebase, reducing regression errors. Led code reviews, Figma-to-code, and accessible UI across a 60+ person cross-functional team. Built with **Vitest**.
- Led frontend integration across the full stack — code reviews, Figma-to-code, accessible and responsive interfaces. Built with **React/TypeScript** and SCSS.

Full Stack Engineer

Accenture Spain

Sep 2022 – Jun 2024

- Developed RESTful API endpoints for a merchandising client and contributed to frontend integration across multiple enterprise accounts. Built with **Node.js** and Docker Compose.

Software Engineer Intern

Instructr · Denmark (Remote)

Jan 2023 – Mar 2023

- Frontend development and integration testing in a remote Agile/Scrum startup. Built with **React**, **Cypress**, and Git.

Projects

WildSphere — Interactive 3D Wildlife Visualization *React 19 TypeScript Three.js Tailwind CSS TanStack Query v5 Framer Motion*

- Architected and deployed an interactive 3D globe consuming live RESTful data from the iNaturalist API. Taught myself Three.js to bring wildlife data to life visually — full ownership from system design to production. wildsphere.netlify.app

DocuChat *FastAPI Python ChromaDB LangChain React TypeScript*

- RAG-based conversational AI tool that ingests documents and answers questions with source-grounded responses — built with a FastAPI/Python backend, ChromaDB for vector storage, LangChain for retrieval orchestration, and a React/TypeScript frontend.

Memory Game — Interactive Browser Game *Vanilla JavaScript Adobe Illustrator*

- Browser memory game built from scratch — vectorized all character illustrations in Adobe Illustrator, then implemented full game logic in vanilla JavaScript. j-jillian.github.io/Memory-game

Education

Full-Stack Web Developer Bootcamp · Ironhack, Madrid

2022

B.A. Digital Interactive Design · Iberoamerican University, Mexico

2018
